

Statement of Purpose

I am **Damanpreet Kaur**, I have found that “you will face many defeats in life but never let yourself be defeated.” I hail from a Rajpura city in Punjab. I am a humble, optimistic, jovial and sensible person. As far as my educational qualification is concerned I have completed my matriculation in the year 2013 from Central Board of Secondary Education and my senior secondary in the year 2015 from the same board. Later in the year 2019 I did my Bachelors of Science from Punjab University. Now I to add some international exposure in my profile, I want to pursue my further studies from USA.

I have selected to study at **University of Riverside California**. It is an open research university that is associated with APLU and it is a proud member of the prestigious university of California System. This is the institution which opened the first medical school in the California. It has been ranked number one university by the U.S. News and World Report. It has a library which has huge collection of more than two million books including science, fiction and fantasy. They have academic standards with robust learning system with professional degree programs. Moreover they have a dynamic campus, expert faculty who are experts and provide education which is experiential and help students to prosper personally and professionally in today’s competitive world.

I have chosen USA as it hosts the most number of international students in the world. The universities are ranked best as they provide offer excellent support system, facilities through workshops, orientations and trainings. They have access to web – based classes which is useful for students. Moreover, the institutions have a unique curriculum, multicultural environment, advanced technology and a plethora of work opportunities. The teaching methodology is highly interactive which encourages critical thinking and students are allowed to participate in class discussions which helps them understand the concept in a better way. According to the QS world ranking 2022, 28 of the top universities are in the U.S.

It was my aspiration to opt for a course which will benefit me in the near future so I have preferred to do **PG Diploma in Bioengineering Management**. It is also called a Biomedical engineering which applies to engineering tools and approaches to solve problems in biology and medicine. It is a commitment to a challenging and rewarding field dedicated to create solutions to improve health. This course is a combination engineering and management which will help me to acquire problem –solving, analytical, managerial and leadership skills. It is relatively a new discipline that combines many aspects of traditional engineering and medicine which focuses on product development, manufacturing, and industrial development. I will be able to learn practical and technical aspects in order to manage projects both at large and small scale.

After the completion of the course I will come back to my homeland, I would like to work as Technical Manager in one of the reputed organization. I am confident that this field of study will fulfill all my dreams and will develop me into a successful professional.

Regards

Damanpreet Kaur
