

My name is **Manjeet Kaur**, I belong to **Punjab, India**. I did my **Matriculation** from **Punjab School Education Board** in **2013**. Further, I completed my Diploma in computer science and engineering from Punjab State Board of Technical Education and Industrial Training in 2016. Later i completed my bachelors in Technology from Maharaja Ranjit Singh Punjab Technical University in 2021. To gain in depth knowledge of this field, I decided to pursue a degree in **Master of Science Engineering**. Now, to understand and learn more hand-on skills, I want to gain a masters degree.

I chose USA for my further studies because their universities have regular class- seminars, workshops, and intensive programs which help students to gain a perspective and insights for the global market. Being a multicultural society USA welcomes new immigrants , which makes it a very dynamic and exciting place to experience various cultures and traditions. According to the Times Higher Education ranking 13 of the top 100 universities globally are located in the USA. The quality of education at these universities is unparalleled, which makes it one of the popular destinations.

My reason to choose University of New heaven as it has been recognized as one of the best universities in the states. It has many campuses which makes it more accessible and the affordability of programs make it more desirable for students. The University is known for its vast variety of programs as they have bachelor's and associate degrees in 105 undergraduate programs, master's degree in various programs. It is also known for its doctorate programs in criminal justice, applied engineering and health sciences, Business Administration. The inclusivity among students, staff and faculty make it easy for students to easily adapt to the environment and the campus experience. I believe that learning in such an environment will not only help me to develop a professional specialization by developing skill sets. The University of New Haven is also known for its strong network into International industry which provides a broad range of professional training.

This program is designed to develop all the practical skills required to establish myself as an engineer. The curriculum of MS Engineering program at University of New Haven includes modules which provide appropriate knowledge of the subject matter. It also includes research programs which will create opportunities to understand theory and practical skills. Through this course, I will learn about operations and new advancements of technology. It will expand my knowledge of technological management on a professional level. I believe that the Engineering program offered at University will conduct my abilities and potential toward the realization of my objectives. I look forward to establishing myself as a successful engineer in India, and will definitely help me to achieve my goal.

Thanks & Regards

Manjeet Kaur
