

Education plays a vital role to strengthen one's mind, character and personality. It enables people to put their potential to optimum use. It also helps to reform the human mind which leads to the growth of society. My name is Ramandeep Kaur , I hail from Punjab, India. I see myself as a goal-oriented and committed person. As we are in the era of technology and advancement, I believe that knowledge of software and web skills will help me to achieve my career objectives. I believe that a Master's degree in Computer science from your esteemed university is my first step towards building a strong career foundation for me. It is then I decided to graduate with a Bachelor's in Computer Science after my schooling. I did my Bachelor's in Computer science from Punjabi University, Patiala . Which will set a ground for my career in computer science. To further quench my thirst to establish my career in IT-Sphere I decided to pursue my Master's in Computer science.

I chose the USA to pursue my higher studies because of its top-notch education system. Studying in the USA means learning from the best system in the world. The American education system not only provides you with the best education, it also helps you to enhance your overall personality and skills. Its main goal is to provide you skills that will help you stand out in the international market. The best-ranked institutions, excellent support facilities, flexible academic environment, and cultural diversity contribute to making it the most preferred destination. The webinars, workshops, training and language workshops make it a good learning experience for students. Also the universities allow you to work on campus which makes it easy to support students financially. The research opportunities along with programs make it a unique learning experience.

I chose Alliant International University because of its unique educational approach and distinguished education programs. The other reason to choose this university is their talented faculty and equally motivated peers. The university is dedicated to cultivating a dedicated and welcoming atmosphere for students. They have a student-centered comprehensive program which emphasizes excellence in professional education. Their inclusivity of diversity within faculty, staff and students make it a unique experience.

My inclination towards computers was no different than any other peer of my generation. However, a workshop during my school time changed my views and I decided to pursue my career in this field. My fascination knew no bounds on learning that humans are learning new avenues through mathematical coding, codes and

programming. The undergraduate programme inspired me to gain practical knowledge through many projects, seminars, researches and assignments. I specifically enjoyed studying web applications and designing. During my undergraduate programme I showcased my knowledge and skills through many projects. I further want to explore new realms of this field which could increase my chances of better employment in the international market.

I am sure that my passion, knowledge and capabilities will grow leaps and bounds as a student at your university and will take me closer to my goal of establishing my promising career in this sphere. I hope you will consider my application and get me admitted.

Thanks & regards,

Ramandeep Kaur
