

Statement of purpose

Introduction: My name is Karamjeet Kaur, and I live in Punjab, India. Regarding my academic background, I completed my senior secondary education from the Punjab School Education in 2017 after completing my secondary school there in 2015. Following that, in 2021, I earned my bachelor's degree from Baba Farid University of Health Sciences' affiliated Mai Bhago College of Nursing. Getting my master's degree in the United States was always my dream. I've now decided to complete my education in the United States. I chose to apply for my Master's degree in the USA since it is a top global destination for higher education and I had always wanted to study there.

Why USA : USA is a great country which is known for its quality of teaching and research. The US universities are the largest educational destinations for international students for overseas education. The system of education is flexible and versatile . The institutions have an excellent programs in all the disciplines they have to offer and the degrees awarded by the US universities are outstanding . Moreover the pupils get the chance to learn and work with expert and excellent researchers in the field. It also emphasises more on practical skills and employment related activities. The universities lead in the field of science and technology and also offer a diverse choice of academic, cultural and athletic activities which helps students to become global citizens and make new friends. It develops self – confidence , cross cultural skills and critical thinking skills.

Why this University: Alliant International University in the United States is my ideal university, I've concluded after doing a lot of research. Alliant International University seems to be a respectable institution that provides excellent practice-based learning in a challenging, creative setting. Lincoln University was the obvious choice after looking into classes and universities. The smaller class numbers than at other universities, which promote better learning and interaction between professors and students, are what initially drew me here. I think it will be simpler for students to comprehend how statistics are employed in different businesses if research programs and case studies are incorporated into the curriculum. The institution also offers a wealth of networking possibilities with regional, national, and worldwide organizations. The multicultural community on campus is seen by students as kind and accepting. Learning in this setting, in my opinion, will benefit me in more ways than just honing my skill sets and becoming a professional specialist.

Why this Course : I decided to do MS Healthcare Analytics. Healthcare Analytics can benefit from healthcare data by anticipating and navigating certain roadblocks, such as illness outbreaks. In order to provide preventative care, healthcare analytics can assist in identifying patients who are at risk for chronic illnesses. More effective

therapies may result from its capacity to predict a patient's susceptibility to a specific illness. Medical research institutes, government organizations, insurance firms, and hospitals are among the places where professionals with an MSc HIA degree might find work. So having education background in medical ,so I decided to do this course.

I will most certainly return home after earning my degree in the United States. country because I have a close relationship with my family here and I will get many opportunities in my home country. I hope you will consider my efforts and gave me opportunity to be a part of your prestigious University.

Regards

Karamjeet Kaur
