

Statement of Purpose

I would like to introduce myself as Ritika Thapar . I am writing to express my intent to pursue in Master of Science in Computer Information System at California Miramar University for Fall 2025 intake. My Educational Background includes 10th and 12th from Punjab school Education Board . I have completed my bachelor degree in 2023 from Lyallpur khalsa College ,Jalandhar which is Affiliated to Guru Nanak Dev University . Now I have decided to do Masters from the United states So I have applied my application .

The United States of America is well-known for having an excellent educational system. Their well regarded colleges can be attributed in part to their superb faculty, sophisticated technology, and adequate funding. These qualities develop a reputable educational system and make their students are among the most eminent academics. Aside from this, cultural diversity gives pupils the chance to learn as they experience a variety of cultural backgrounds. As they create a community with fresh perspectives and ideas to discuss, these colleges provide a friendly and cozy atmosphere for students. Another benefit is that academic programs can be tailored to students' interests, goals, and strengths. Students have a unique learning experience thanks to university trainings, workshops, and internships. Students are able to sustain themselves financially through their job on campus. Additionally, there is an attempt to permit international students to remain in the United States following graduation in order to pursue careers at some of the largest corporations in the world.

After researching a number of universities, I decided to attend the California Miramar University because it is providing a curriculum that is both worldwide and relevant to my field of interest; this is also what sets them apart. The school places more of an emphasis on assisting students in gaining professional and practical abilities that will enable me to take advantage of fantastic chances in India as soon as I graduate from college. The university's primary goal is to produce graduates who have a significant impact on their field through in-depth knowledge, a commitment to moral behavior, perceptive participation in global society, relationships with a variety of populations, and an awareness of the authority and responsibility entrusted to them. Because of the university's diverse student body, each student can encounter several cultures and acquire real-world experience. They are able to attract substantial endowments each year, which they effectively use to raise the standard of infrastructure and education. Thus, taking into account all the compelling factors, I decided on this university.

I decided to get a Master degree in MS computer information System . Pursuing a Master's in Computer Information Systems offers significant professional and personal benefits. This degree not only broadens technical expertise but also bridges the gap between IT and business

strategy. By combining core knowledge in areas like systems analysis, cybersecurity, and data management with essential leadership and communication skills, graduates are well-prepared to take on strategic roles within organizations. Moreover, the program enhances one's ability to manage technology-driven projects, collaborate across departments, and make data-informed decisions that support business objectives. With a strong foundation in both technology and management, an MS in CIS can lead to expanded career opportunities, increased earning potential, and a clear path toward leadership positions in the ever-evolving tech industry.

I hope you will find my eagerness to learn more admirable and give my application some thought.

Regards

Ritika Thapar
